

## INFUSION PUMP DAIHWA DI-2000

“General Ward, ICU and CCU Infusion Pump” Volumetric infusion pump Medifusion DI-2000 can be used for continuous flow rate infusion of fluid drugs in general ward, ICU or CCU as well as infusion of anesthetics or anticancer agents. With more compact design, improved safety & able to make own infusion set list by software.

### FEATURES

1. Compact Design
2. Small size – 1.7 kg
3. Compatible with various kinds of IV set
4. Broad range of flowrate : 0.1 to 1,200 ml/h
5. One touch Bolus, Pause function
6. Dosage – auto calculation  
(Input data: body weight, drug volume, solution volume, dose rate)
7. Titration – Enable to change the flowrate during infusion
8. Keylock for safety
9. Event history up to 2000
10. Firmware upgrade via internet (system or software upgrade)
11. Quality Assurance & Certification – ISO13485, CE

### STANDARD

1. Flowrate range – Micro: 0.1 to 99.9 ml/h with 0.1 increment  
Normal: 100 to 1,200 ml/h with 1 increment
2. Accuracy -  $\pm 5\%$  with assigned IV set
3. Total Volume Range - 0 to 9,999 ml or no limit
4. Bolus rate – 700 ml/h or selectable
5. Power Requirement- AC 100 to 240V, 50/60Hz
6. Power Consumption – 35VA
7. Protection Type – Class I, Type CF, IPX1
8. Size – 120x130x206 mm / 1.7 kg
